EDIH Holder/Staker Guide to Receive SOL Airdrop

**1**   Navigate to **https://app.eldorado.market/wallet**

ⓘ   We are assuming you already use El Dorado and have your Keystore or XDEFI wallet connected. This can be done from any CACAO wallet that allows you to set the memo field as well.

      This needs to be from the wallet where you either Hold or Stake your EDIH.

2   Click "Transfer" button (which should be green if you have CACAO… which you should since this is the same wallet you inscribed or bought your EDIH from).

3   Click the "Recipient address" field. Copy the following address (this is the address that controls EDIH):
      maya123hnhqjlfjny7rzj8fxzgdlkmxjvup2796l6kl

4 Press **ctrl** + **v**

(maya123hnhqjlfjny7rzj8fxzgdlkmxjvup2796l6kl will now appear in "Recipient address" field if you did this properly)

**5** You should have your SOL address copied. Click the "Memo (optional)" field.

⚠ Memo field is NOT optional. This is how we will get your SOL Address. Step 5 was simple saying what it is labeled in the El Dorado UI.

6 **ctrl** + **v**

Your SOL address should now fill the Memo field if you did this properly.

7 Click the "Amount (e.g. 17.5)" field.

8 Type "0.00001" (some people have already sent more which is fine - point is we just want your SOL address, so send as little as it lets you)

9   Click "Send"
